

FINANCIAL PODS

Content Growth and Publishing Strategy

Growth Engine product workstream / Basel-first acquisition, validation, and enterprise demand generation

Version 1.0 • 16 August 2026 • Additional artifact; prior Financial Pods artifacts remain unchanged

Strategic thesis

Financial Pods Growth Engine is not a separate product. It is the governed acquisition and market-learning layer of Financial Pods. It turns the same approved regulatory knowledge, Golden Lesson components, FinBank scenarios, deterministic calculations, and bilingual teaching system into public content that attracts learners, captures demand, and converts qualified users into free-pod participants, paying customers, practitioners, and enterprise opportunities.

Audience: founder, product and growth leaders, regulatory SMEs, content operators, developers/agents, analytics owners, and enterprise sales partners.

Executive summary

Financial Pods should begin publishing before the full paid product launches. Public content is useful education, not a public copy of the paid course. Social content explains and sparks practice; the product trains competency through classification, calculation, simulation, jurisdiction comparison, tutor interaction, assessment, voice viva, and mastery evidence.

Product layer	Primary job	Proof of value
Public Growth Engine	Discoverability, trust, demand validation, list building	Useful Basel teaching; consistent, source-aware public voice
Free Pod	Activation and learning-value proof	A learner completes a real worked experience without a credit card
Paid Pods	Competency and progression	Interactive work, mastery, certification, expanding subject catalogue
Enterprise	Workforce capability and evidence	Cohorts, analytics, governance, customization, procurement-ready controls

North-star outcome

Create a repeatable loop in which one SME-approved lesson produces 10–20 public assets, each asset has one measurable next step, behavior flows into product analytics, and audience questions inform the lesson roadmap. Optimize for qualified learning and revenue outcomes—not vanity reach.

Operating principles

- One knowledge system, multiple outputs: paid learning and public content derive from governed source objects and deterministic examples.
- Official regulation remains authoritative; practitioner input adds operational realism but never replaces the source of truth.
- Separate facts from interpretation, and label jurisdiction, version, effective date, and proposal/final/in-force status.
- English and Arabic share one brand and conceptual glossary; localization is reviewed, not merely translated.
- Every content item has a defined audience, learning promise, source packet, CTA, landing destination, campaign ID, and success metric.
- Human approval is mandatory before publishing regulated or jurisdiction-specific claims.

1. Product strategy: the Growth Engine

The Growth Engine sits beside—rather than outside—the tutor, FinBank, calculation, knowledge, course, and assessment domains. It consumes approved learning components and returns demand signals to product planning.

Financial Pods

- └ Paid learning: Tutor • FinBank • Calculations • Assessments • Voice Viva • Mastery
- └ Free Pod: Basel Foundations + Golden Lesson preview
- └ Growth Engine: YouTube • Shorts • Instagram • X • LinkedIn • Newsletter
 - └ qualified traffic → registration → activation → trial → paid → enterprise

Goals of social publishing

Goal	What success looks like	Decision enabled
Authority	Financial Pods repeatedly appears around Basel, RWA, capital, SAMA, CBUAE, U.S. rules, ALM and FTP	Which domains earn trust and search demand
Demand validation	Topics and questions produce differentiated watch, save, click and signup behavior	Which lessons and jurisdictions to build next
Owned audience	Followers become consented email subscribers and product accounts	Reduced dependence on platform algorithms
Teaching validation	Formats, lengths, voices, visuals and languages produce measurable learning engagement	How to shape Golden Lessons and microlearning
Partner discovery	SMEs, bankers, associations, universities and consultants engage	Who can review, distribute, pilot or advise
Customer acquisition	Content generates activated learners, paid conversions and enterprise leads	Where to invest production and promotion

2. Audience and customer funnel

Priority audience segments

Segment	Primary need	Entry content	Desired conversion
Early-career analysts / students	Understand concepts and prepare for work/interviews	60 Seconds of Basel; challenges; career content	Free account → Free Pod → paid individual
Capital / risk practitioners	Accurate refreshers, comparisons, implementation insight	Regulation Changed; Same Loan, Different Country	Newsletter → paid/professional plan

Segment	Primary need	Entry content	Desired conversion
Managers / CRO organizations	Team capability, consistency, auditability	FinBank workflow, mastery and cohort evidence	Demo request → pilot → enterprise
Bank L&D / talent	Role-ready learning with measurable outcomes	Program overview, learner proof, assessment examples	Discovery call → scoped pilot
Consultants / SMEs	Authority, collaboration, qualified network	Deep dives, source-led threads, reviewer program	SME network, referral, co-marketing
Universities / associations	Applied curriculum and employability	Foundations, simulations, instructor resources	Academic/association partnership

Funnel stages and instrumentation

Stage	User action	Core event	Primary metric
Reach	Sees post/video	content_impression / video_view	Qualified reach; view rate
Attention	Consumes meaningful portion	video_progress_25/50/75/95	Average % viewed; completion
Engagement	Saves, shares, comments, follows	content_engaged	Saves/shares; substantive comments
Intent	Visits profile or clicks CTA	cta_clicked	CTR by asset/CTA
Acquisition	Submits email or registers	lead_captured / account_created	Visitor-to-lead; signup rate
Activation	Starts and completes Free Pod action	lesson_started / calc_completed	Activation and lesson completion
Conversion	Starts trial or buys	trial_started / subscription_started	Free-to-trial; trial-to-paid
Retention	Returns and progresses	weekly_active / mastery_updated	W4 retention; mastery progress
Enterprise	Qualifies and enters sales process	enterprise_lead_qualified	MQL→SQL→pilot→contract

Illustrative funnel math is useful for capacity planning but is not a forecast. Establish baselines with the first 30 assets and replace assumptions with observed cohort conversion.

3. Channel strategy

Channel	Role	Core formats	Publishing intent
YouTube	Evergreen authority, search discovery, deep trust	8–15 minute lessons, worked examples, live/Q&A later	Own high-intent learning queries and demonstrate teaching quality
YouTube Shorts	Fast discovery and bridge to long-form/product	30–90 second concepts, challenges, clips	Earn completion, comments, and qualified next-step clicks
Instagram	Visual discovery and brand familiarity	Reels, carousels, stories, polls	Make finance legible, memorable, and shareable
X	Regulatory credibility and real-time professional dialogue	Threads, annotated charts, concise video, source notes	Engage practitioners around changes and implications
LinkedIn	Enterprise and career distribution	Native posts/video, documents, founder/SME viewpoints, case studies	Reach managers, L&D, consultants, universities and buyers
Email/newsletter	Owned relationship and conversion layer	Weekly rule, lesson digest, product update, event invite	Nurture by segment and bring users back to the product

Channel execution rules

- Do not mechanically cross-post. Preserve the claim and source packet, but rewrite the hook, pacing, aspect ratio, caption, CTA, and community prompt for each channel.
- YouTube titles solve a query; Instagram openings create immediate visual tension; X leads with the regulatory change or implication; LinkedIn leads with the job, team, or business consequence.
- Use one canonical asset ID across derivatives so analytics can connect every post back to the lesson, source set, experiment, and CTA.
- Maintain a channel-specific platform checklist in configuration because upload limits and recommendation mechanics change over time.

4. English and Arabic strategy

Begin with one Financial Pods brand and bilingual playlists/series. Preserve common English abbreviations where practitioners use them, paired with approved Arabic terminology on first mention. Avoid separate brands until Arabic demand, operations, and community volume justify it.

Phase	English	Arabic	Gate
0–30 days	Primary narration; Arabic subtitles on priority assets	Terminology QA and 2–4 native tests	Subtitle accuracy; demand signals

Phase	English	Arabic	Gate
31–60 days	Continue winning formats	Native Arabic Shorts/Reels for SAMA and foundations	Completion and save rate versus English cohorts
61–90 days	Long-form winners and jurisdiction content	At least one native Arabic deep lesson/pilot	Qualified registrations and retention
Scale	Shared lesson source; localized hooks/examples	Dedicated cadence or channel if justified	Sustainable reviewer and community capacity

Localization workflow

1. Lock the canonical English concept, calculation, source status, and glossary terms.
2. Create an Arabic adaptation brief specifying audience, dialect/register, terms that remain in English, and on-screen reading constraints.
3. Translate for meaning and professional usage; do not translate citations, rule identifiers, or numeric assumptions loosely.
4. Run bilingual regulatory SME review, pronunciation review, subtitle timing QA, and right-to-left visual QA.
5. Publish with language-specific metadata and track cohorts separately while preserving the shared canonical asset ID.

5. Recurring content franchises

Franchise	Promise	Typical format	Product bridge
60 Seconds of Basel	One foundational concept made usable	30–75 sec vertical	Free Foundations lesson or glossary interaction
Basel Challenge	Solve before the explanation	45–90 sec video/poll	Interactive assessment or calculator
Same Loan, Different Country	Hold the exposure constant; compare jurisdiction treatment	Carousel, thread, 6–12 min video	Jurisdiction comparison inside Golden Lesson
Regulation Changed	What changed, status, affected audience, and next action	X/LinkedIn thread + video	Versioned update briefing / alert signup
Inside FinBank	Follow a realistic item through bank functions	Animated workflow / deep video	FinBank scenario and simulation
Banking Career	Roles, workflows, interviews and skill evidence	Short, post, webinar	Career pathway, assessment, certificate
Source to Calculation	Trace a rule into a deterministic worked example	Long video + annotated source	Calculation lab with source citations

Franchise	Promise	Typical format	Product bridge
Ask the Basel Tutor	Answer a real audience question with context	Short/Q&A/live clip	Pause-anywhere tutor demonstration

6. Content-to-product conversion

CTA ladder

Intent level	CTA examples	Destination
Low	Save this checklist; comment your answer; follow the series	Platform engagement / retargetable audience
Medium	Download the worked-example sheet; join the weekly Basel rule	Topic landing page / email capture
High	Try the RWA calculator; take the 5-question SAMA assessment	Tool or assessment with registration
Product-ready	Complete the Corporate Exposure lesson free; compare jurisdictions	Free Pod / Golden Lesson
Enterprise	Request a team diagnostic; book a bank pilot discussion	Enterprise qualification form / calendar

CTA design rules

- Use one primary CTA per asset. Secondary follow/follow-up language may appear, but it must not compete.
- Match the CTA to the content promise: calculation content goes to a calculator; comparison content goes to a comparison; career content goes to a diagnostic or pathway.
- Preserve the learner's context on arrival: headline, example, jurisdiction, and terminology should continue from the content.
- Use campaign and content IDs in every link; never use untagged profile links as the only route.
- Do not gate the first moment of value. Let the learner see the problem, preview the tool, or begin the lesson before asking for registration when technically feasible.

7. Landing page and Free Pod funnel

Basel landing page

1. Open with the outcome: “Master Basel by actually doing the work.”
2. Show the learning loop: Watch → Ask Tutor → Classify → Calculate → Simulate → Compare → Practice → Voice Viva.
3. Demonstrate one FinBank corporate exposure and one deterministic RWA output with clear “illustrative example” labeling.
4. Offer the primary CTA: “Try the Corporate Exposure lesson free — no credit card.”
5. Add trust evidence: official-source grounding, jurisdiction/version status, SME review workflow, and what the product is not (legal/regulatory advice).
6. Add role-based proof: analyst, manager, L&D, and enterprise paths; use case studies only when evidence exists.
7. Capture consent and attribution, then route the user directly into the relevant lesson rather than a generic dashboard.

Free Pod: Basel Foundations

Module	Free experience	Activation event
Capital and RWA	Short guided explanation + concept check	Concept check passed
EAD and risk weight	Interactive definitions and simple worked example	Inputs changed and recalculated
Corporate exposure	FinBank scenario; classify and calculate	Corporate lesson completed
Tutor interaction	One grounded text/voice exchange	Tutor question asked
Assessment	Five-question diagnostic with feedback	Assessment completed
Upgrade moment	Show locked jurisdiction comparison, practice set and viva	Trial or paid CTA viewed

Lifecycle messages

- Immediate: deliver promised asset and resume the exact learning state.
- Day 1: explain the next task and expected time, using the topic that generated the signup.
- Day 3: send a worked challenge tied to incomplete progress.
- Day 7: share progress/mastery evidence and invite the next module or trial.

- Enterprise signal: if consented behavior shows team/buyer intent, invite a diagnostic or pilot discussion without overstating inference.

8. First 30 / 60 / 90 days

Window	Objective	Concrete deliverables	Exit criteria
Days 1–30	Establish operating system and baseline demand	Brand/channel setup; source and SME workflow; landing/early-access page; analytics taxonomy; 3 cornerstone videos; 10+ derivatives; first Basel Challenge; 2 bilingual tests	All assets trace to source packets; attribution works; first qualified signups and substantive questions
Days 31–60	Build cadence and activate the Free Pod	4–6 long videos total; 10–15 short lessons; 10 challenges; 4 jurisdiction comparisons; 2–4 Arabic assets; Free Pod MVP; weekly newsletter	Repeatable weekly production; measured content→activation conversion; two winning formats/topics
Days 61–90	Prove conversion and enterprise interest	30-asset library; Arabic deep test; webinar/roundtable; learner interviews; team diagnostic; outreach to SMEs/L&D; first pilot proposals	Evidence of activation/retention, first paid conversions or clear pricing tests, qualified enterprise pipeline

Weekly cadence during the first 90 days

Day	Operating rhythm
Monday	Demand review; select canonical lesson/claim; confirm source status and brief.
Tuesday	SME-approved outline; record/build long-form master; create derivatives.
Wednesday	Edit, captions, Arabic adaptation, metadata, link and tracking QA.
Thursday	Publish cornerstone asset and professional thread/post; community response.
Friday	Publish challenge/short; analyze early signals; log questions and experiments.
Ongoing	Respond with source-aware answers; escalate uncertain claims; feed demand into backlog.

9. First 30 Basel content ideas

#	Topic / hook	Franchise	Format	CTA
1	What is RWA in 60 seconds?	60 Seconds	Short/Reel	Foundations lesson
2	\$10m loan × 75%: calculate RWA	Basel Challenge	Short/poll	RWA calculator
3	Why exposure class comes before risk weight	Source to Calculation	YouTube + carousel	Corporate Golden Lesson
4	What are CET1, AT1 and Tier 2?	60 Seconds	Carousel/Short	Capital stack module
5	Capital ratio: numerator vs denominator	60 Seconds	Short	Foundations assessment
6	What is EAD—and why it is not always balance?	60 Seconds	YouTube/Short	EAD lab
7	CCF explained with an off-balance-sheet example	Source to Calculation	YouTube + thread	CCF calculator
8	Corporate vs retail exposure: first classification test	Basel Challenge	Carousel/poll	Classification practice
9	What happens to RWA when credit quality deteriorates?	Inside FinBank	Animated Short	Scenario simulator
10	Can collateral automatically reduce RWA?	Ask the Tutor	Short/Q&A	Tutor session
11	Basel capital buffers explained	60 Seconds	YouTube + carousel	Buffers lesson
12	Minimum capital vs management target	Inside FinBank	LinkedIn post	Capital planning Pod
13	Same corporate loan: BCBS vs SAMA	Same Loan, Different Country	YouTube/thread	Jurisdiction compare
14	Same corporate loan: BCBS vs CBUAE	Same Loan, Different Country	Carousel/video	Jurisdiction compare
15	Same loan: U.S. rule status vs BCBS baseline	Same Loan, Different Country	Source-led thread	Jurisdiction compare
16	Proposal, final rule, or in force?	Regulation Changed	Carousel/checklist	Regulatory alert signup
17	How to read a Basel rule without losing the decision path	Source to Calculation	YouTube	Source navigator
18	Five data fields that change a corporate RWA result	Inside FinBank	Carousel	FinBank scenario
19	The rating-mapping trap	Basel Challenge	Short/thread	Practice set
20	Why deterministic calculations matter in AI learning	Source to Calculation	LinkedIn/video	Product demo
21	Can an AI tutor cite the exact rule?	Ask the Tutor	Demo clip	Free tutor interaction
22	Pause the lesson and challenge the assumption	Ask the Tutor	Demo Short	Golden Lesson
23	What a regulatory capital analyst does in a day	Banking Career	Video/post	Career diagnostic
24	Five Basel interview questions	Banking Career	Carousel/video	Free assessment
25	How RWA movements are investigated inside a bank	Inside FinBank	YouTube	FinBank workflow

#	Topic / hook	Franchise	Format	CTA
26	From loan origination to regulatory report	Inside FinBank	Animated workflow	Cross-Pod preview
27	Arabic Basel glossary: RWA, EAD, CET1	60 Seconds	Arabic Reel	Arabic Foundations
28	SAMA corporate exposure vocabulary in Arabic/English	Same Loan, Different Country	Arabic carousel	SAMA lesson
29	Audience question: “Where did 75% come from?”	Ask the Tutor	Q&A Short	Source + calculator
30	Golden Lesson preview: classify, calculate, compare, defend	Launch	Trailer	Free Corporate lesson

10. Production workflow and AI media factory

End-to-end content lifecycle

1. Demand intake: collect search opportunities, product roadmap priorities, learner questions, regulatory developments, sales objections, and SME suggestions.
2. Brief: assign canonical content ID, audience, learning outcome, jurisdiction, rule status, source set, assumptions, format derivatives, CTA, destination, owner, reviewer, deadline, and experiment.
3. Source packet: attach official documents, locators, retrieval date, effective/proposal status, canonical claims, approved calculation fixtures, and prohibited/uncertain statements.
4. Canonical script: write the platform-neutral teaching narrative and deterministic example. Make claims atomic so reviewers can approve or reject them.
5. Regulatory and learning review: SME validates rules and assumptions; learning editor validates clarity, scaffolding, and challenge; localization reviewer approves Arabic.
6. Asset generation: create master narration/video, then derive channel-specific scripts, vertical edits, carousels, threads, captions, thumbnails, descriptions, quizzes, and email copy.
7. Media production: combine reusable diagrams, Remotion-style deterministic animations, selected generative visuals, avatar/tutor footage when useful, and a consistent narrator identity. AI outputs remain drafts until approved.
8. Preflight QA: check claims, citations, calculation outputs, captions, pronunciation, RTL layout, accessibility, disclosures, aspect ratio, safe zones, links, campaign parameters, and platform metadata.
9. Publish and community: publish through approved credentials, log platform post IDs, respond using the source packet, and escalate new regulatory questions.
10. Measure and learn: join platform, website, product, CRM, and revenue events; record insight and experiment result; update backlog without rewriting history.

AI media factory boundaries

AI may accelerate	Human/accountable control
Topic clustering, draft outlines, derivative scripts, captions, cut suggestions, translations, thumbnails, metadata, transcription, variants	Final claim accuracy, source status, calculation fixtures, Arabic professional usage, rights/consent, brand judgment, disclosures, publication approval
Synthetic voice/avatar where consented and licensed	Voice identity governance, disclosure when required, quality/appropriateness, revocation and vendor controls
Generative scenes and illustrations	No fabricated regulator documents, logos, quotes, people, endorsements, or evidence; asset provenance retained

11. Social publishing architecture

```

/growth/
├ strategy/      # content_strategy.md, channel_strategy.md, conversion_funnel.md
├ calendar/     # editorial_calendar.md + machine-readable schedule
├ briefs/       # canonical briefs by content_id
├ sources/      # manifests/locators; approved official-source references
├ scripts/      # canonical and channel derivatives
├ templates/    # social_templates.md, caption/thumbnail/layout templates
├ standards/    # video_standards.md, localization, accessibility, disclaimers
├ assets/       # source, generated, edited, subtitles, thumbnails, provenance
├ campaigns/    # campaign manifests, UTM rules, landing mappings
├ pipeline/     # content_pipeline.md, schemas, validation, orchestration
├ analytics/    # analytics.md, taxonomy, dashboards, experiments
├ governance/   # review records, approvals, corrections, retention
└ archive/      # immutable published manifests and superseded versions

```

Logical components

Component	Responsibility	Key control
Content registry	Canonical IDs, metadata, states, ownership and lineage	Immutable published versions; auditable transitions
Source registry / knowledge service	Official source objects, version/effective status, claim links	Only approved source IDs enter publishable assets
Calculation service	Deterministic fixtures and outputs	LLM never invents production arithmetic
Workflow orchestrator	Brief→review→render→QA→schedule→publish	Separation of author/reviewer/publisher
Asset store/CDN	Masters, derivatives, captions, thumbnails, provenance	Rights, hashes, access and retention

Component	Responsibility	Key control
Publisher adapters	Platform-specific authenticated publishing	Least privilege, idempotency, retry, rate-limit handling
Link/landing service	Campaign routing and deep links	UTM/content IDs; preserve user context
Event pipeline / warehouse	Join platform, site, product, CRM and billing events	Consent, identity resolution, data minimization
Analytics and experiments	Dashboards, cohorting, decision logs	Predefined hypotheses and guardrails
CRM / lead routing	Enterprise qualification and follow-up	Consent, scoring transparency, SLA and owner

Content state machine

idea → briefed → sourced → drafted → SME_review → learning_review → localized → produced → QA → approved → scheduled → published → measured → refreshed | corrected | retired

No automation may skip the approved state. A correction creates a linked new version and correction record; it does not silently overwrite the published manifest.

12. Analytics and KPIs

Layer	KPIs	Diagnostic cuts
Content	Qualified reach, view rate, average % viewed, completion, returning viewers	Channel, format, franchise, hook, language, jurisdiction, duration
Engagement	Saves, shares, substantive comments, follows per viewer	Question type, sentiment, professional role signals
Acquisition	CTR, landing conversion, lead rate, account creation, cost per activated learner	Content ID, CTA, landing variant, source/medium/campaign
Activation	Lesson start/complete, calculator use, tutor question, assessment completion	Entry topic, language, persona, device, time-to-value
Learning	Pre/post gain, mastery evidence, retry pattern, viva completion	Module, cohort, item difficulty, misconception
Revenue	Trial, paid conversion, ARPU, CAC, payback, content-attributed revenue	First/last/multi-touch attribution; cohort
Retention	W1/W4 return, module progression, subscriber churn	Acquisition source, paid plan, persona
Enterprise	MQL, SQL, meetings, pilots, cycle time, pipeline and won revenue	Account, source asset, use case, segment

North-star metric and guardrails

Recommended north star: monthly content-attributed activated learners who complete a meaningful Free Pod action. Pair it with paid/enterprise conversion and learning quality. Guardrails include regulatory correction rate, complaint rate, unsubscribe rate, low-quality lead rate, SME cycle time, and production cost per activated learner.

13. Experimentation framework

1. Write a one-sentence hypothesis tied to a funnel constraint, not a vague desire for more engagement.
2. Choose one primary metric, guardrails, audience, unit of randomization or comparison, minimum observation window, and stopping rule before launch.
3. Change one meaningful variable where possible: hook, format, language treatment, CTA, landing message, thumbnail, or lesson preview.
4. Preserve asset lineage and campaign IDs; do not merge results from materially different audiences without segmentation.
5. Record result as win, lose, inconclusive, or invalid, plus the decision and next test. Do not retrofit the hypothesis after seeing data.
6. Promote a winner only after it improves downstream quality—not merely clicks—unless the experiment was explicitly top-of-funnel.

Experiment	Hypothesis	Primary metric	Guardrail
Challenge vs explanation hook	Active problem framing improves qualified attention	75% completion / save rate	Negative feedback
Calculator vs newsletter CTA	Interactive intent converts more activated learners	Activated learner per 1,000 views	Lead quality / cost
English + Arabic subtitles vs native Arabic	Native narration improves Saudi activation	Free Pod start rate	Translation correction rate
Generic Basel vs SAMA-specific landing	Jurisdiction continuity improves signup	Landing conversion	Bounce / misclassification
Founder voice vs AI tutor clip	Consistent instructor identity improves trust	Return viewer / activation	Production time and consent

14. Customer acquisition and enterprise lead generation

Individual acquisition motions

- Organic evergreen search: high-intent YouTube lessons and source-led pages.
- Series-based discovery: Shorts/Reels/challenges that feed precise tools and Free Pod modules.
- Owned nurture: weekly rule, challenge, regulatory update, and progress reminder.
- Partnership distribution: practitioner reviewers, associations, universities, newsletters, podcasts, and communities.
- Paid promotion only after organic content-to-activation is demonstrated; optimize to activated learner, not cheap video views.

Enterprise motion

1. Create role-specific team diagnostics for regulatory capital analysts, graduate cohorts, and adjacent teams.
2. Use content engagement to identify themes, then approach accounts with a relevant evidence-based asset—not inferred personal claims.
3. Offer a 30–45 minute briefing or roundtable around a current rule, jurisdiction comparison, or workforce skill gap.
4. Qualify the business problem, learner group, sponsor, procurement/security path, timeline, and success measure.
5. Propose a bounded pilot: defined cohort, baseline assessment, selected Golden Lessons, support, completion/mastery metrics, and executive readout.
6. Convert pilot evidence into an enterprise plan with cohort administration, reporting, governance, integrations, and content roadmap.

Lead signal	Route	Follow-up SLA
Enterprise form / demo request	Immediate CRM creation; assign owner; enrich account safely	1 business day
Team diagnostic with consent	Score against explicit rubric; route qualified response	2 business days
Manager/L&D webinar attendee	Send resource, ask scoped qualification question	2 business days
Practitioner asks product/team question	Human response; offer demo only when relevant	2 business days
High engagement without consent	Nurture through platform/content only	No personal sales outreach

15. Governance, accuracy, and disclaimers

Approval roles

Role	Accountability
Content owner	Brief, timeline, completeness, channel fit, record integrity
Regulatory SME	Claim, jurisdiction, source status, interpretation and calculation assumption review
Calculation reviewer	Fixture, formula, units, rounding and reproducibility
Learning editor	Accuracy-preserving clarity, pedagogy, challenge and assessment quality
Arabic/localization reviewer	Terminology, meaning, register, pronunciation, subtitles and RTL presentation
Legal/compliance owner	Disclosures, rights, privacy, endorsements, promotions and incident policy
Publisher	Final preflight, credentials, scheduling and publication record

Regulatory accuracy standard

- Attach every material rule claim to an official-source object with jurisdiction, issuer, title, publication/effective dates, status, version, locator, retrieval date, and approved excerpt/summary.
- Clearly distinguish Basel Committee baseline from local implementation; never imply that a canonical BCBS text automatically equals an in-force local rule.
- Label proposals, consultations, final rules, transitional provisions, superseded guidance, and illustrative teaching assumptions prominently.
- Use deterministic calculation services or approved fixtures. Show inputs, units, formula path, rounding, and scenario limitations.
- Time-sensitive “Regulation Changed” assets receive an explicit expiration/review date and alert monitoring.
- If a reviewer cannot resolve uncertainty, narrow or remove the claim. Publishing speed is not a reason to speculate.

Standard educational disclaimer

Financial Pods content is for education and training only. It is not legal, regulatory, accounting, investment, or professional advice and should not be used as a substitute for applicable law, regulation, supervisory guidance, official interpretations, or institution-specific policies. Rules and proposals may change; viewers should verify the cited official source, jurisdiction, version, status,

and effective date. Illustrative examples simplify facts and assumptions and may not reflect the treatment of a real exposure.

Correction and incident process

1. Triage report severity: cosmetic, clarity, calculation, material regulatory claim, privacy/rights, or security.
2. For material risk, unpublish or add a visible warning while investigation proceeds; preserve evidence and access logs.
3. Assign SME and accountable owner; reproduce the issue against the published manifest and source packet.
4. Publish a corrected version with a linked correction note; notify affected learners/customers when impact warrants.
5. Update knowledge object, tests, templates, and reviewer checklist; run retrospective and track recurrence.

16. Developer and agent Markdown files

File	Required contents
content_strategy.md	Mission, audiences, positioning, franchises, editorial principles, scope boundaries, annual/quarterly themes, ownership and approval model.
channel_strategy.md	Per-channel audience, role, formats, cadence, metadata, moderation, accessibility, CTA patterns, platform configuration and deprecation rules.
editorial_calendar.md	Rolling 90-day calendar; content_id, status, owner, source packet, jurisdiction/status, franchise, channel derivatives, language, CTA, publish date, reviewer and experiment.
video_standards.md	Long/short duration bands, aspect ratios, hook/pacing, safe zones, typography, captions, audio, pronunciation, disclosures, thumbnail rules, export/QA checklist.
social_templates.md	Approved templates for hooks, captions, X threads, LinkedIn posts, carousels, descriptions, pinned comments, community replies, corrections and bilingual variants.
analytics.md	Event taxonomy, identity/consent, attribution, dashboard definitions, KPI formulas, data-quality tests, retention, access controls and review cadence.
conversion_funnel.md	Personas, stage definitions, CTAs, landing routes, Free Pod activation, lifecycle messaging, scoring, enterprise handoff and funnel targets as assumptions/baselines.
content_pipeline.md	State machine, schemas, source/calculation integration, generation, review gates, publishing adapters, idempotency, retries, observability, incident and rollback procedures.

Minimum front matter for each governed file

```
owner: growth
status: draft|approved|deprecated
version: 1.0
last_reviewed: YYYY-MM-DD
next_review: YYYY-MM-DD
approvers: [role_or_id]
related_adrs: []
source_of_truth: path_or_system
```

Agent operating constraints

- Agents may propose, draft, transform, render, tag, validate, and summarize; they may not self-approve regulated claims or publish without the approved workflow.
- Agents must reference canonical source and calculation IDs rather than copying unsupported claims between files.
- Prompts, model/provider versions, inputs, outputs, reviewer decisions, and final hashes are logged for reproducibility subject to privacy controls.
- Production credentials remain outside the repository; publisher adapters use least-privilege secrets and environment separation.
- Any claim-status conflict, missing citation, failed deterministic test, or expired source blocks approval.

17. Implementation next steps

Priority	Next step	Deliverable / acceptance
P0	Approve Growth Engine charter and accountable owners	Written decision: part of Financial Pods; owner, SME lead, publisher, analytics and enterprise owner assigned
P0	Create `/growth/` scaffold and eight Markdown standards	Reviewed files with front matter, CODEOWNERS/review rules, templates and issue forms
P0	Define content, source, approval and event schemas	Versioned JSON schemas; sample Golden Lesson 001 record validates
P0	Build source packet and calculation fixtures for first 10 assets	Every claim traceable; deterministic tests pass; proposal/final status visible
P0	Launch Basel landing/early access and attribution	Deep links, consent, content_id/UTM capture, account and activation events verified
P1	Produce three cornerstone videos and derivative batch	Master + channel variants + Arabic tests pass preflight and SME approval
P1	Implement workflow board/state machine and approval log	No publishable asset can bypass reviewer gates; correction flow tested

Priority	Next step	Deliverable / acceptance
P1	Stand up baseline dashboard	Content→landing→account→activation joined; data-quality checks documented
P1	Build Free Pod MVP	Corporate example, tutor touch, calculator and assessment produce activation events
P2	Launch newsletter and lifecycle automation	Consent-compliant sequences; unsubscribe and preference management verified
P2	Pilot enterprise diagnostic and roundtable	Qualification rubric, CRM routing, pilot template and outcome scorecard
P2	Review day-30/60/90 evidence and lock scale decisions	Decision log: formats, languages, channels, topics, spend and hiring

Definition of done for the first release

- At least 10 useful public Basel assets are live across the priority channels and derive from approved source packets.
- Every asset has a canonical content ID, one CTA, a destination, attribution, owner, reviewer, published manifest, review date, and correction path.
- The landing page and Free Pod provide a coherent context-preserving path into a real product action.
- Analytics can report content → click → signup → activation, segmented by language, channel, content ID, and franchise.
- English and Arabic terminology, subtitle, pronunciation, and RTL checks are documented and used.
- The team can publish, pause, correct, refresh, and retire an asset without losing audit history.
- A day-30 review identifies at least two supported product insights and one next experiment; day-90 review produces an explicit scale/pivot decision.

Appendix A. Canonical content brief

Field	Required value
Identity	content_id, title, franchise, parent lesson, version, owner, status
Audience	persona, jurisdiction, language, knowledge level, job-to-be-done
Learning	one outcome, misconception, worked/practice element, desired behavior
Claims	claim IDs, official source IDs/locators, status/effective date, uncertainty
Calculation	fixture ID, inputs, units, formula path, expected output, rounding

Field	Required value
Production	master format, derivatives, narrator/avatar/voice, asset provenance, rights
Conversion	one CTA, destination, offer, campaign/content parameters
Review	SME, learning, localization, legal/compliance, publisher approvals
Measurement	hypothesis, primary KPI, guardrails, observation window
Lifecycle	publish date, next review, expiration, correction/retirement links

Appendix B. Publish preflight checklist

- Claim and source links resolve; jurisdiction and status labels are on-screen where needed.
- Calculation matches approved fixture and shows assumptions/units.
- Title/hook is accurate; no guarantee, endorsement, or urgency is fabricated.
- Captions, transcript, contrast, reading order, alt text and audio intelligibility pass.
- Arabic terminology, pronunciation, subtitle direction/timing and layout pass when applicable.
- Rights, consent, voice/avatar, music, stock, regulator marks and generative provenance are cleared.
- Disclaimer is present at the appropriate level; proposal/final/in-force status is not buried.
- CTA, deep link, campaign parameters, landing continuity, consent and analytics events work.
- Platform crop, thumbnail, safe zones, description, pinned comment, moderation plan and publish time are approved.
- Published manifest, hash, reviewer decisions, review date and incident contact are stored.

Appendix C. Strategic decision

Launch public Basel content now, in parallel with the Golden Lesson build, using the same governed knowledge and media pipeline. Keep Financial Pods as one product and one brand. The Growth Engine teaches enough to create trust and demand; the Free Pod proves the experience; paid and enterprise offerings develop and demonstrate competency.
